Chapter 7 Lesson Factoring: Difference of Two Squares

State Standards

A.SSE.2	Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.	
A.SSE.3b	Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.
